DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Worthington et al in view of Ohnishi et al. Worthington et al teach the claimed oven control but do not set forth the claimed preset duty cycles as 1.5-3 of the off to the on periods nor the conventional hysteresis range of claim 2. The patent to Ohnishi et al are cited for teaching these hysteresis and duty cycle ranges as common when used in a temperature control device for a roller. In view of this teaching one of ordinary skill in heating control would have been motivated by the Ohnishi et al teaching to use the claimed hysteresis and duty cycle ranges in the Worthington et al device, these choices dependent on the end use of the oven and the accuracy desired. Note that the oven.

Allowable Subject Matter

Claims 1,3-12 are allowed.

Claims 14-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record does not teach maintaining of the surface temperature of the heating element. .

Response to Arguments

Applicant's arguments filed 07-18-05 have been fully considered but they are not persuasive. Note that the claimed limitations set forth in claim 13 depict merely typical hysteresis control for the conventional oven. If the over set point was say 400 degrees, the oven would cycle from say 390 to 410 degrees, thereby meeting the claim limitations.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of
